

Database Development

Information On Demand

Custom Database Development, Database Analysis, Data Mining

Are you in need of a computer-based solution for tracking, organizing, displaying or inputting your business data? Technology Solutions can provide custom programming solutions that range from small stand-alone database program to multi-users network browser based versions. We can modify your existing database if applicable or design a new database scheme based on the needs and size of your business.

Whether you need a custom solution for Contact Data, Financial, Real Estate, Sales, Marketing or whatever your business may be, let Technology Solutions create the right solution for your business.

We can create a custom package that can integrate with your website. Run a local program on your network and update your website information automatically or vice versa. Collect information from clients, employees, vendors etc.. on your website and view the information locally on your desktop.
